To Whom it May Concern,

I am writing to you in regards to the proposed legislation involving the implementation of V-chip technology and its assistance to the citizens of America to protect their children from the sexual and violent acts that are shown on television in our society. The children of America must no longer be subjected to the numerous rapes, sexual references, murders, assaults, and other violent and sexual acts shown on television every day of programming. This offensive material has been shown to affect the moral values of the children as they grow up, and this moral deficiency has been proven to remain with the citizens as they continue their lives as adults in our violent and sexually driven society. The V-chip would help the parents of today's world have better control over what their children are able to view if the parent is away from the television set. Although the V-chip technology has already been approved, it is the responsibility of the Federal Communications Commission to require the broadcasting stations to create an accurate rating system so that this technology may be of use to the parents of our society, and so that it may benefit many future generations of Americans.

Thank you in advance for any considerations that may be made on this important issue.

Sincerely yours,

Nicole Russell
